THE SURFACE

Fun starts at the track surface. All Slotfire wooden racetracks receive a surface coating of a high quality two-component polyurethane coatings. No reflection of light and a very fine-grained surface characterize him. The track has directly at start grip. Both with »Ortmännern« and with foam rubber wheels beautiful drifts are possible. For good driving behavior are joined by the same noble look and feel of the paint. Lasting fun at a consistently high level is guaranteed!

THE DESIGN

Those who want a little more than just the »pure doctrine« has two options to revalue his track. Slotfire offers customers a greening including painted edge strip at a fixed price, or specific modell country parts which perfect fit on your Slotfire.

THE TIME MEASUREMENT

Precise timekeeping on your Slotfire for best results. For this we offer our customers various ways, all have one thing in common: They were developed by Slotfire specially for Slotfire.
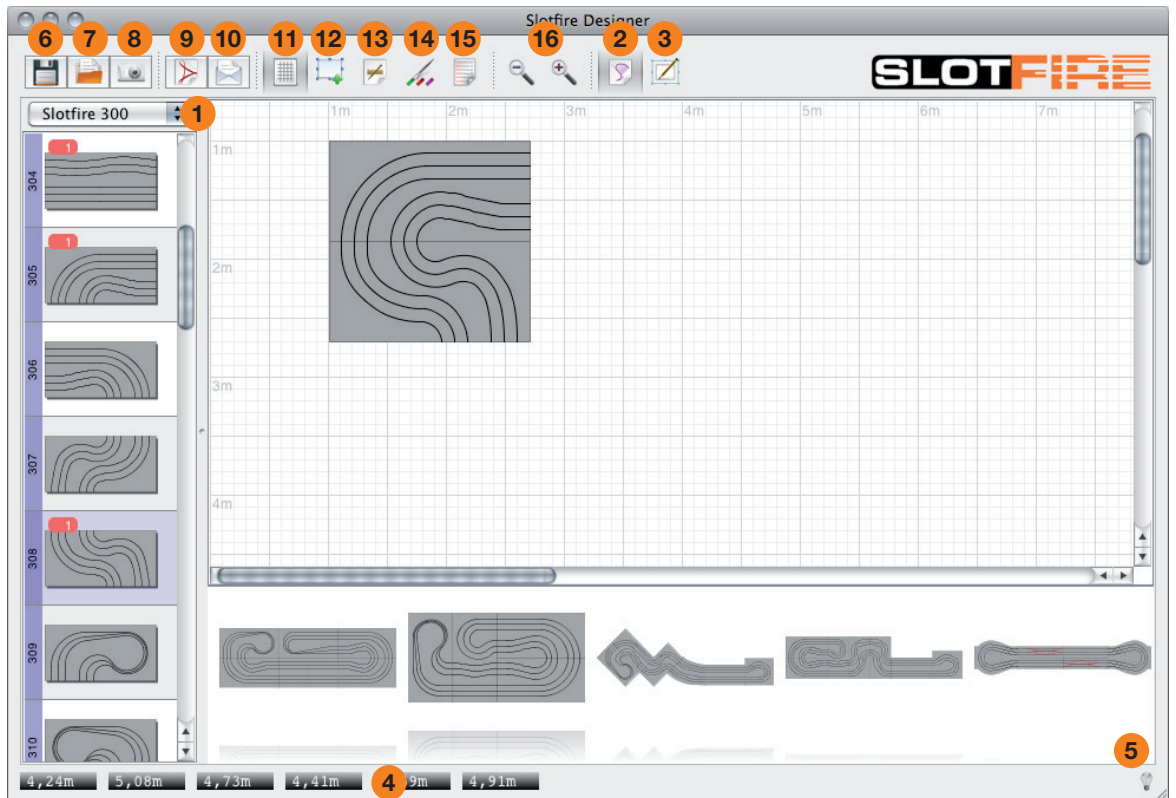

» **Race:** The software for up to eight lanes and unlimited drivers compatible with Windows (from WIN2k) and Mac (OS 10.5/ Intel)

» **Racebox mini:** It forms the link between the track and your computer. It is available in the variants »Racebox mini internally«, built into the connection module or as an external device for installation outside of the modules. Both models have connections for starting light and chaos button. The connection to the computer is done by USB.

» **Racebox:** In addition to the functions of the Racebox mini Racebox is able to set the voltage separately for each lane by Race software.

THE CONNECTION MODULE

The Slotfire connection modules have much in them! In the cable channels several meters cables are laid. Each track will be fed individually. IN the connection modules, the power supply is in both the outward and the return strand of the three tracks. For the controllers banana plugs (black, yellow, red) are, mounted in the module. The controllerjust have to be plugged in.

ONLINE TRACK DESIGNER

Three additional modules can be found in our online route planner at www.slotfire.de. They increase the ability to plan even more. The 327/328 extended the crossing. And 330 and 331 with two other modules are multi-part curve. Can be installed spread that the individual parts of the curves also about the path, provides for more variation in the route planning.
